

Java

```
class Solution {  
    public int[][] highFive(int[][] items) {  
  
    }  
}
```

JavaScript

```
/**  
 * @param {number[][]} items  
 * @return {number[][]}  
 */  
var highFive = function(items) {  
  
};
```

TypeScript

```
function highFive(items: number[][]): number[][] {  
  
};
```

C++

```
class Solution {  
public:
```

```
vector<vector<int>> highFive(vector<vector<int>>& items) {  
    }  
};  
-----
```

C#

```
public class Solution {  
    public int[][] HighFive(int[][] items) {  
    }  
}
```
